Summary

From educating and inspiring talented and hardworking young people on their track towards this carrier. Philosophically, I believe there are two roles to being a software engineer. First, the facilitator. Someone who helps everyone doing their best work together by creating a psychologically safe and involving environment to collaborate. Then, the developer. Someone who translates the team's best working into a desirable, realistic, and measurable product. I value honest conversations and progressive thinking, and I aim to create things that empower and inspire.

Experience

Lead Software Engineer | Consultant

Minority Programmers Association

Mar 2021 - Present (5 months +)

The Minority Programmers Association is an international network of developers unifying together to tackle humanitarian issues with software solutions.

- Team Lead to several developers, Teaching and Mentoring them at the same time, reviewing their work, providing feedback, and enhancing software development best practice.
- Contributing to Developing a decentralized Multi-functioning platform for STEM activities
- Enhancing 100% use of blockchain technology in STEM Field

Full-stack software engineer

Andela

- Collaborated on Their Ecommerce Platform using WordPress Technologies and Plugins (Like Woocommerce, Elementor, and many others)
- Introduced Digital marketing best Practices to increase SEO (Search engine optimization)
- Was an admin to the Server That Holds and hosted different client's Websites

Fullstack developer | freelancer

Upwork

Feb 2019 - Jun 2020 (1 year 5 months)

Upwork is a freelancing platform where enterprises and individuals connect in order to conduct business, I worked on both ends of web and mobile applications, but some of the contracts and agreements I made back then was breached and this provided me with negative experience in this scenario, this triggered me to start being a contractor rather than a freelancer, below I will share my experience along this journey.

- Developed several Software systems like ITANGE system Software, Xavina Pharmacy System, and Uruyuki Systems, all of them Ended up being open Source as I wasn't paid for my work, But I have no regrets because It helped me to better understand that I always have something to learn from Failed or incomplete projects.
